PRO MAGIC Chase

Wickey PRO
long lasting, affordable fun

Productdetails

SKU	100431
User	Max. 22
Age group	3-12 years
Inclusive	no
Material	19 mm thick sheets made of two-tone HDPE, vandalism-resistant, up to 80% recycled
Warranty	10-year warranty[3] on all wooden, stainless steel and HDPE parts
Standard	Quality and safety tested in accordance with EN-1176
Play values / activities	

With a wooden climbing frame from our PRO MAGIC range, you can make your playground even more attractive for visitors and customers. Our climbing frames are composed of different modules, so you can choose the ideal model depending on the space available in your play area. During development and production, the focus is particularly on safety for children but also on the environment. That is why our playground equipment is "Designed in Germany" and made of European solid wood. For the coloured elements, we use HDPE sheets made from up to 80% recycled material. This way you offer your customers or playground visitors a place to let their children play carefree.

Impregnated solid wood

We use impregnated pine wood for our playground equipment, most of which comes from native forests in south-eastern Germany. Our wood is pressure-impregnated in accordance with Use Class 3 and in some cases Use Class 4 (in accordance with EN 335). Wickey PRO wood thus offers exceptional durability outdoors.

HDPE elements

Our coloured HDPE elements are made from 19 mm thick sheets that consist of 80% recycled material.

Selection of slides

A large selection of colours and three different material variants are available for the slides.

- HDPE 6 mm Rotomould
- HDPE 19 mm sheets
- Stainless steel (SS304)

Metal elements

All metal parts are made of high-quality stainless steel. We also offer a coloured, powder-coated metal variant for some components.

Net material

The net material consists of particularly robust, reinforced 16 mm ropes with an internal steel wire core that ensures maximum stability. The hard-wearing polypropylene sheathing ensures a long service life and reliable protection against the weather.

Anchorage

For anchorage, we use angle irons made of 5 mm thick, hot-dip galvanised steel. These ensure particularly stable and durable attachment in the ground. The anchors are specially designed for setting in concrete and are characterised by high weather resistance.
